

MAINTENANCE GUIDE/ NATURAL OAK

Before using your new smoked oak item, please read this guide to ensure a well-protected durable surface.

BEFORE USING THE PRODUCT / To maintain the natural and untreated surface it is important *not* to oil or treat your product. The natural look will only stay like this, if you do not treat the product.

DAILY MAINTENANCE / Use a lint free cloth and wipe immediately after spills. For deep cleaning we recommend using Guardian Wood Cleaner. Never use strong soap or cleaning products.

ONGOING MAINTENANCE / It is not necessary to treat your natural oak products regularly.

CORRECT MAINTENANCE IS IMPORTANT / Solid wood is a living material. Variations in seasons and temperature differences can affect the wood. Therefore, we do not recommend this product in countries, where the humidity is dry, and likewise the product must not be near a fireplace or wood stove. If you do choose to oil your natural oak product, the wood will appear darker and more golden.
